

City of Shoreacres

NOTICE OF MEETING

Notice is hereby given that a Regular Meeting of the
City Council
of the City of Shoreacres, Texas, will be held on
December 11, 2023 at 6:00 p.m.
in the City Council Chambers on the first floor at City Hall, 601 Shore Acres Blvd.,
Shoreacres, Texas, at which time the following subjects will be discussed, to wit:

+

1.0 CALL TO ORDER / ROLL CALL: Members Present and Absent

2.0 PLEDGES OF ALLEGIANCE

Texas Pledge:

Honor the Texas flag; I pledge allegiance to thee, Texas, one state under God, one and indivisible.

3.0 SPECIAL PRESENTATIONS

3.1 None.

4.0 COUNCIL REPORTS & REQUESTS

4.1 An opportunity for members of council to share community news.

5.0 PUBLIC HEARINGS & PUBLIC COMMENTS

5.1 Public Comments

This is the opportunity for the public to address council or comment on items which appear on the agenda. Time is limited to five minutes per speaker. Comments are to be directed to the city council and dialogue with the audience is not permitted. Councilmembers are prohibited by law from participating in discussion or deliberation of items not specifically identified on this agenda.
--

6.0 ADMINISTRATIVE REPORTS

6.1 City Manager's Report ^{Harrison}

6.2 Monthly Police Department Report. ^{Harrison}

6.3 Monthly Public Works Department Report. ^{Harrison}

7.0 BUSINESS

7.1 Minutes from the November 13, 2023 meeting.

7.2 Ordinance 2023-12-01 relating to changes in the floodplain ordinance. ^{Harrison}

7.3 Second regular meeting ^{Jennings}

8.0 ADJOURNMENT

I, the undersigned authority, do hereby certify that the above Notice of Meeting of the governing body of the City of Shoreacres, Texas is a true and correct copy of said Notice and that I posted a copy of said Notice on the bulletin board at City Hall on December 8, 2023 at or before 6:00 p.m., at a place convenient and readily accessible to the general public at all times; to remain so posted continuously for at least 72 hours preceding the scheduled time of said Meeting.

SHOREACRES, TEXAS

DATED THIS December 8, 2023.

David Jennings

David Jennings, Mayor

The City Council of the City of Shoreacres reserves the right to adjourn into executive session at any time during the course of this meeting to discuss any of the matters listed above, as authorized by Texas Government Code Sections 551.071 (Consultations with Attorney), 551.072 (Deliberations about Real Property), 551.073 (Deliberations about Gifts and Donations), 551.074 (Personnel Matters), 551.076 (Deliberations about Security Devices) and 551.086 (Economic Development).

The City Council Chamber is wheelchair accessible and accessible parking spaces are available.

Requests for accommodation or interpretive services must be made at least two (2) working days prior to the meeting. Please contact the City Office at 281.471.2244 or fax 281.471.8955 for additional information.

I, the undersigned, do hereby certify that this Notice of Meeting was removed from the City Hall bulletin board at 6:00 PM on December 12, 2023.

BY:

CASH POSITION DECEMBER 2023

2023 Restricted Funds:

Restricted Debt	\$32,461.32
Unused Wastewater Project Funds	\$53,937.80
Utility Deposit Fund	\$93,125.11
Road Repair Taxes Collected (TexPool)	\$300,353.85
Covid Grant Funds	\$47,475.38
Park Pavilion Improvements budgeted 2022	\$29,873.14
SETH Funds	\$5,360.82
Total	\$562,587.42

Unencumbered Funds:

General Fund Checking	\$81,238.40
Utility Checking	\$243,038.65
Unencumbered Funds (Tex Pool)	\$654,886.93
Total	\$979,163.94

City of Shoreacres

MINUTES OF MEETING

Notice is hereby given that a Regular Meeting of the
City Council

The City of Shoreacres, Texas held on.

Monday, November 13, 2023, at 6:00 p.m.

In the city council chambers on the 1st floor at City Hall, 601 Shore Acres Blvd,
Shoreacres, Texas, at which time the following subjects will be discussed

- 1.0 **CALL TO ORDER / ROLL CALL:** Members Present and Absent – Quorum
 - 1.1 Mayor Jennings, Mayor Pro-Tem McKown, Alderman Greeson, Alderman Bell
Alderman Hoskins Absent was Alderwoman Ramos.

- 2.0 **PLEDGES OF ALLEGIANCE**

Texas Pledge:
Honor the Texas flag; I pledge allegiance to thee, Texas, one state under God, one
and indivisible.

- 3.0 **SPECIAL PRESENTATIONS**
 - 3.1 None

- 4.0 **COUNCIL REPORTS & REQUESTS**
 - 4.1 None

- 5.0 **PUBLIC HEARINGS & PUBLIC COMMENTS**
 - 5.1 **Public Comments**

George Perdue – 3622 Miramar, Shoreacres, TX 77571 – Request to add to the
agenda of the next meeting discussion of the new parking lot added above Shell
Beach. General comments and recommendations of ways the city could spend
their monies in a better way as well as why the city would break/change an
ordinance that has been in place for years without any discussion. Would
recommend a group to be put together to assess this issue and come back to the
Council with some recommendations.

Robert Johnson – 3618 Miramar, Shoreacres, TX 77571 – Passed out photos
taken of fisherman fishing late at night with spotlights shining into our yard,
others are pics of trash left behind as well as 5-10 cars block the view of the water
from out home. Reiterate what George says as well. Would like to see the
parking lots marked for Gold Cart only this would ensure the ones used are
actually residents of Bay Colony, Shoreacres, etc.

<p>This is an opportunity for the public to address the council. Dialogue, deliberation, or discussion, with council members on items that are not on the agenda is prohibited by law. Time for each speaker is limited to five minutes.</p>
--

6.0 ADMINISTRATIVE REPORTS

6.1 City Manager's Report - Harrison

Cash position - see attached – advised notice the General Fund account low, however the taxes have not started to come in yet so the beginning of the year you will notice this account rise. Mayor Jennings made the same comments and explained all of the property tax funds collected in the beginning of the year and we moved cash to the Texpool account to boost that which is the emergency reserve. No questions and/or discussion.

6.2 Monthly Police Department Report - Harrison

Mr. Harrison advised they were recently made aware that there was a sex offender living in the city who had not registered with the city. The County he came from was contacted and notified – they issued a warrant for his arrest and the warrant was attempted to be served without much disruption in the City. This was not successful; however, Pasadena PD did arrest him, and he has since come into the Station to register for the city. We now have 2 sex offenders living in our city. The month was typical – with citations being written. General discussion was held with questions from Mr. Greeson and Mr. Bell regarding the Death Investigation in the city. Mr. Harrison advised he always notifies the mayor of any death in the city; this death was an elderly person who passed away of natural causes. No other questions or discussion had.

6.3 Monthly Public Works Report - Harrison

Mr. Harrison advised the rain that we have been having has decreased the number of leaks we have had in the city. The Meadowlawn water project is 96% complete, with the rain coming the remainder will need to wait. There was believed to be a sewer line collapse in the 800 block of North Country Club as a new home is being built with issues of getting sewer to that location, we are still working on this. Report Attached. General discussion and questions were held with Mr. Greeson asking about the sign at the front of the city. Mr. Harrison advised the sign is ready, the hold-up is the weather at this time. No other questions and/or discussion.

7.0 BUSINESS

7.1 Minutes from November 13, 2023, meeting - Goodman

Mr. Greeson made a motion to with a second from Mr. McKown to review the minutes from October 9th and October 16th. Mr. Greeson advised there were a few corrections that needed to be made regarding the misspelling of his name and the word Gold in the 2nd paragraph changed to Golf. Mr. Greeson made a motion to accept the minutes as corrected with a second from Mr. McKown.

7.2 Oath of Office for Diane Stokes, Municipal Court Clerk - Jennings

Mayor Jennings introduced Diane Stokes as the new Municipal Court Clerk followed by her swearing in Oath of Office.

7.3 **Ordinance 2023-11-01 Relating to water and sewer connection fees** - Jennings
Mr. Hoskins made a motion with a second from Mr. Greeson to discuss Ordinance 2023-11-01 relating to the Water and Sewer connection fees. Discussion was held on section B changing the pricing for the Water Tap fee on a new build increasing from the current fee of \$750 to \$1500 plus the cost of the meter. Discussion was held on section C changing the sewer tap fee on new builds from \$200 to \$2750 if the connection is greater than 6” the cost will increase to \$1000. Discussion was held on section D deposits for Road Bore deposits from \$750.00 to \$5000 and reducing the timeframe to complete the work from 1 year to 6 months. Mayor Jennings polled the council members with all being in agreement with the increase in pricing as presented as well as the reduction of time for the work to be completed. The motion passed unanimously.

7.4 **Ordinance 2023-11-02 Relating to activities allowed with a permit in parks** Harrison
Mr. Hoskins made a motion with a second from Mr. McKown to discuss Ordinance 2023-11-02 relating to activities allowed with a permit in parks. Mayor Jennings advised the changes were mainly language cleanup as per the attached document. Discussion was held with Mr. Greeson asking if there needed to be signs put or are there sign up regarding the park hours. Mr. Hoskins added that any changes in ordinances needed to be published in the newspaper. Mr. Bell asked if any of these items pertained to the Pier, and it was explained that the Pier is NOT part of Miramar Park as it is leased out. No other discussion the motion passed unanimously.

7.5 **Second regular meeting 11-27-2023** – Jennings
None

8.0 **ADJOURNMENT** Jennings

A motion from Mr. Hoskins with a second from Mr. Greeson to adjourn the meeting. Meeting adjourned at 6:42 pm

I, the undersigned authority, do hereby certify that the above Notice of Meeting of the governing body of the City of Shoreacres, Texas is a true and correct copy of said Notice and that I posted a copy of said Notice on the bulletin board at City Hall on ., at a place convenient and readily accessible to the general public at all times; to remain so posted continuously for at least 72 hours preceding the scheduled time of said Meeting.

DATED THIS November 13, 2023

By: *David Jennings*
David Jennings – Mayor

The City Council of the City of Shoreacres reserves the right to adjourn into executive session at any time during the course of this meeting to discuss any of the matters listed above, as authorized by Texas Government Code Sections 551.071 (Consultations with Attorney), 551.072 (Deliberations about Real Property), 551.073 (Deliberations about Gifts and donations), 551.074 (Personnel Matters), 551.076 (Deliberations about Security Devices) and 551.086 (Economic Development).

The City Council Chamber is wheelchair accessible and accessible parking spaces available.

Requests for accommodation or interpretive services must be made at least two (2) working days prior to the meeting. Please contact the City Office at 281-471-2244 or fax 281-471-8955 for additional information.

I, undersigned do hereby certify that this notice of Meeting was removed from the City Hall Bulletin Board at 6:00 pm on November 13, 2023.

ORDINANCE NO. 2023-12-01

CITY OF SHOREACRES

AN ORDINANCE OF THE CITY OF SHOREACRES, TEXAS, PERTAINING TO CHANGES IN CHAPTER 30 FLOODS; FINDING COMPLIANCE WITH THE OPEN MEETINGS LAW; AND PROVIDING AN EFFECTIVE DATE HEREOF.

WHEREAS, the City Council of the City of Shoreacres has determined that the current ordinance pertaining to floodplain management is insufficient to maximize the city's rating in the Community Rating System for the National Flood Insurance Program;

NOW, THEREFORE, BE IT ORDAINED BY THE CITY COUNCIL OF THE CITY OF SHOREACRES, TEXAS THAT:

Section 1. That the following changes to Chapter 30 –Floods be amended as follows:

Chapter 30 FLOODS¹

ARTICLE I. IN GENERAL

Secs. 30-1—30-30. Reserved.

ARTICLE II. FLOOD DAMAGE PREVENTION²

DIVISION 1. STATUTORY AUTHORIZATION, FINDINGS OF FACT, PURPOSE AND METHODS

Sec. 30-31. Statutory authorization.

The Legislature of the State of Texas has in the Flood Control Insurance Act, Texas Water Code, Section 16.315 delegated the responsibility of local governmental units to adopt regulations designed to minimize flood losses. Therefore, the City of Shoreacres, Texas, does ordain the provisions of this article.

¹Cross reference(s)—Buildings and building regulations, ch. 10; environment, ch. 22; planning, ch. 50; utilities, ch. 66; vegetation, ch. 70; zoning, ch. 74; subdivisions, app. A.

²Editor's note(s)—Ord. No. 07-04, adopted May 21, 2007, amended Art. II, which consisted of §§ 30-31—30-96, in its entirety to read as herein set out. Former Art. II pertained to similar subject matter and derived from Ord. No. 96-12, adopted Aug. 26, 1996.

(Ord. No. 07-04, 5-21-2007; Ord. No. 2016-226, 10-10-2016)

Sec. 30-32. Findings of fact.

- (1) The flood hazard areas of the City of Shoreacres are subject to periodic inundation, which results in loss of life and property, health and safety hazards, disruption of commerce and governmental services, and extraordinary public expenditures for flood protection and relief, all of which adversely affect the public health, safety and general welfare.
- (2) These flood losses are created by the cumulative effect of obstructions in floodplains which cause an increase in flood heights and velocities, and by the occupancy of flood hazard areas by uses vulnerable to floods and hazardous to other lands because they are inadequately elevated, floodproofed or otherwise protected from flood damage.

(Ord. No. 07-04, 5-21-2007)

Sec. 30-33. Statement of purpose.

It is the purpose of this article to promote the public health, safety and general welfare and to minimize public and private losses due to flood conditions in specific areas by provisions designed to:

- (1) Protect human life and health;
- (2) Minimize expenditure of public money for costly flood control projects;
- (3) Minimize the need for rescue and relief efforts associated with flooding and generally undertaken at the expense of the general public;
- (4) Minimize prolonged business interruptions;
- (5) Minimize damage to public facilities and utilities such as water and gas mains, electric, telephone and sewer lines, streets and bridges located in floodplains;
- (6) Help maintain a stable tax base by providing for the sound use and development of floodprone areas in such a manner as to minimize future flood blight areas; and
- (7) Ensure that potential buyers are notified that property is in a flood area.

(Ord. No. 07-04, 5-21-2007)

Sec. 30-34. Methods of reducing flood losses.

In order to accomplish its purposes, this article uses the following methods:

- (1) Restrict or prohibit uses that are dangerous to health, safety or property in times of flood, or cause excessive increases in flood heights or velocities;
- (2) Require that uses vulnerable to floods, including facilities which serve such uses, be protected against flood damage at the time of initial construction;
- (3) Control the alteration of natural floodplains, stream channels, and natural protective barriers, which are involved in the accommodation of floodwaters;
- (4) Control filling, grading, dredging and other development which may increase flood damage;
- (5) Prevent or regulate the construction of flood barriers which will unnaturally divert floodwaters or which may increase flood hazards to other lands.

(Ord. No. 07-04, 5-21-2007)

Sec. 30-35. Definitions.

Unless specifically defined below, words or phrases used in this article shall be interpreted to give them the meaning they have in common usage and to give this article its most reasonable application.

Alluvial fan flooding means flooding occurring on the surface of an alluvial fan or similar landform which originates at the apex and is characterized by high-velocity flows; active processes of erosion, sediment transport, and deposition; and unpredictable flow paths.

Apex means a point on an alluvial fan or similar landform below which the flow path of the major stream that formed the fan becomes unpredictable and alluvial fan flooding can occur.

Appurtenant structure means a structure which is on the same parcel of property as the principal structure to be insured and the use of which is incidental to the use of the principal structure.

Area of future conditions flood hazard means the land area that would be inundated by the one-percent-annual chance (100-year) flood based on future conditions hydrology.

Area of shallow flooding means a designated AO, AH, AR/AO, AR/AH, or VO zone on a community's Flood Insurance Rate Map (FIRM) with a one percent or greater annual chance of flooding to an average depth of one to three feet where a clearly defined channel does not exist, where the path of flooding is unpredictable and where velocity flow may be evident. Such flooding is characterized by ponding or sheet flow.

Area of special flood hazard is the land in the floodplain within a community subject to a one percent or greater chance of flooding in any given year. The area may be designated as Zone A on the Flood Hazard Boundary Map (FHBM). After detailed rate making has been completed in preparation for publication of the FIRM, Zone A usually is refined into zones A, AO, AH, A1—30, AE, A99, AR, AR/A1—30, AR/AE, AR/AO, AR/AH, AR/A, VO, V1—30, VE or V.

Base flood means the flood having a one percent chance of being equaled or exceeded in any given year.

Base flood elevation (BFE) means, the elevation shown on the Flood Insurance Rate Map (FIRM) and found in the accompanying Flood Insurance Study (FIS) for zones A, AE, AH, A1—A30, AR, V1—V30, or VE that indicates the water surface elevation resulting from the flood that has a one percent chance of equaling or exceeding that level in any given year. Also called the "Base Flood."

Basement means any area of the building having its floor subgrade (below ground level) on all sides.

Breakaway wall means a wall that is not part of the structural support of the building and is intended through its design and construction to collapse under specific lateral loading forces, without causing damage to the elevated portion of the building or supporting foundation system.

Critical feature means an integral and readily identifiable part of a flood protection system, without which the flood protection provided by the entire system would be compromised.

Design flood elevation (DFE) means, the elevation that includes a two-foot free-board above the base flood elevation established by FEMA. Also called minimum base flood elevation (see section 30-42).

Development means any manmade change to improved and unimproved real estate, including but not limited to buildings or other structures, mining, dredging, filling, grading, paving, excavation or drilling operations or storage of equipment or materials.

Elevated building means, for insurance purposes, a non-basement building, which has its lowest elevated floor raised above ground level by foundation walls, shear walls, posts, piers, pilings, or columns.

Existing construction means for the purposes of determining rates, structures for which the "start of construction" commenced before the effective date of the FIRM or before January 1, 1975, for FIRMs effective before that date. "Existing construction" may also be referred to as "existing structures."

Existing manufactured home park or subdivision means a manufactured home park or subdivision for which the construction of facilities for servicing the lots on which the manufactured homes are to be affixed (including, at a minimum, the installation of utilities, the construction of streets, and either final site grading or the pouring of concrete pads) is completed before the effective date of the floodplain management regulations adopted by a community.

Expansion to an existing manufactured home park or subdivision means the preparation of additional sites by the construction of facilities for servicing the lots on which the manufactured homes are to be affixed (including the installation of utilities, the construction of streets, and either final site grading or the pouring of concrete pads).

Flood or flooding means a general and temporary condition of partial or complete inundation of normally dry land areas from:

- (1) The overflow of inland or tidal waters.
- (2) The unusual and rapid accumulation or runoff of surface waters from any source.

Flood elevation study means an examination, evaluation and determination of flood hazards and, if appropriate, corresponding water surface elevations, or an examination, evaluation and determination of mudslide (i.e., mudflow) and/or flood-related erosion hazards.

Flood insurance rate map (FIRM) means an official map of a community, on which the Federal Emergency Management Agency has delineated both the special flood hazard areas and the risk premium zones applicable to the community.

Flood insurance study (FIS): See "Flood elevation study."

Floodplain or floodprone area means any land area susceptible to being inundated by water from any source (see definition of flooding).

Floodplain management means the operation of an overall program of corrective and preventive measures for reducing flood damage, including but not limited to emergency preparedness plans, flood control works and floodplain management regulations.

Floodplain management regulations means zoning ordinances, subdivision regulations, building codes, health regulations, special purpose ordinances (such as a floodplain ordinance, grading ordinance and erosion control ordinance) and other applications of police power. The term describes such state or local regulations, in any combination thereof, which provide standards for the purpose of flood damage prevention and reduction.

Flood protection system means those physical structural works for which funds have been authorized, appropriated, and expended and which have been constructed specifically to modify flooding in order to reduce the extent of the area within a community subject to a "special flood hazard" and the extent of the depths of associated flooding. Such a system typically includes hurricane tidal barriers, dams, reservoirs, levees or dikes. These specialized flood-modifying works are those constructed in conformance with sound engineering standards.

Floodproofing means any combination of structural and non-structural additions, changes, or adjustments to structures which reduce or eliminate flood damage to real estate or improved real property, water and sanitary facilities, structures and their contents.

Flood surge hazard area (FSHA) means, areas that have flood surge hazards associated with wind driven waves, tidal surges and hurricane wave wash where higher construction standards and the control of fill and grading may reduce flood damage (see section 30-98). FSHA includes inland areas within the limit of moderate wave action (LiMWA).

Floodway: See "Regulatory floodway."

Free-board means, the additional elevation above the FEMA base flood elevation to reach the minimum base flood elevation required by the City of Shoreacres (see section 30-42).

Functionally dependent use means a use, which cannot perform its intended purpose unless it is located or carried out in close proximity to water. The term includes only docking facilities, port facilities that are necessary for the loading and unloading of cargo or passengers, and ship building and ship repair facilities, but does not include long-term storage or related manufacturing facilities.

Highest adjacent grade means the highest natural elevation of the ground surface prior to construction next to the proposed walls of a structure.

Historic structure means any structure that is:

- (1) Listed individually in the National Register of Historic Places (a listing maintained by the Department of Interior) or preliminarily determined by the Secretary of the Interior as meeting the requirements for individual listing on the National Register;
- (2) Certified or preliminarily determined by the Secretary of the Interior as contributing to the historical significance of a registered historic district or a district preliminarily determined by the Secretary to qualify as a registered historic district;
- (3) Individually listed on a state inventory of historic places in states with historic preservation programs which have been approved by the Secretary of the Interior; or
- (4) Individually listed on a local inventory of historic places in communities with historic preservation programs that have been certified either:
 - (a) By an approved state program as determined by the Secretary of the Interior or;
 - (b) Directly by the Secretary of the Interior in states without approved programs.

Increased cost of compliance (ICC) means coverage that provides payment of up to \$30,000.00 to substantially damaged properties to help cover the cost of mitigation activities that will reduce the risk of future flood damage to a building if all of the following for the structure are met: 1. The structure is covered by an insurance policy through the National Flood Insurance Program (NFIP); 2. The structure must have suffered flood damage on at least two occasions in a ten-year period ending on the day of the second loss; 3. The cost to repair the flood damage, on average, equals or exceeds 25 percent of the market value of the building at the time of each of the two flood losses, or cumulatively total 50 percent of the pre-flood market value (a value less than 50 percent for substantial damage does not qualify for ICC), as defined by the local floodplain ordinance, and: 4. In addition to the claim requesting ICC, the NFIP must have paid a previous qualifying claim.

Levee means a manmade structure, usually an earthen embankment, designed and constructed in accordance with sound engineering practices to contain, control, or divert the flow of water so as to provide protection from temporary flooding.

Levee system means a flood protection system which consists of a levee, or levees, and associated structures, such as closure and drainage devices, which are constructed and operated in accordance with sound engineering practices.

Limit of moderate wave action (LiMWA) means, the inland limit of the area expected to receive 1.5-foot or greater breaking waves during the one-percent-annual-chance flood event.

Lowest floor means the lowest floor of the lowest enclosed area (including basement). An unfinished or flood-resistant enclosure, usable solely for parking or vehicles, building access or storage in an area other than a basement area is not considered a building's lowest floor; provided that such enclosure is not built so as to render the structure in violation of the applicable non-elevation design requirement of Section 60.3 of the National Flood Insurance Program regulations.

Manufactured home means a structure transportable in one or more sections, which is built on a permanent chassis and is designed for use with or without a permanent foundation when connected to the required utilities. The term "manufactured home" does not include a "recreational vehicle".

Manufactured home park or subdivision means a parcel (or contiguous parcels) of land divided into two or more manufactured home lots for rent or sale.

Mean sea level means, for purposes of the National Flood Insurance Program, the National Geodetic Vertical Datum (NGVD) of 1929 or other datum, to which base flood elevations shown on a community's flood insurance rate map are referenced.

Minimum base flood elevation means, the elevation that includes a two-foot free-board above the base flood elevation established by FEMA. Also called design flood elevation (see section 30-42).

New construction means, for the purpose of determining insurance rates, structures for which the "start of construction" commenced on or after the effective date of an initial FIRM or after December 31, 1974, whichever is later, and includes any subsequent improvements to such structures. For floodplain management purposes, "new construction" means structures for which the "start of construction" commenced on or after the effective date of a floodplain management regulation adopted by a community and includes any subsequent improvements to such structures.

New manufactured home park or subdivision means a manufactured home park or subdivision for which the construction of facilities for servicing the lots on which the manufactured homes are to be affixed (including at a minimum, the installation of utilities, the construction of streets, and either final site grading or the pouring of concrete pads) is completed on or after the effective date of floodplain management regulations adopted by a community.

Primary frontal dune means a continuous or nearly continuous mound or ridge of sand with relatively steep seaward and landward slopes immediately landward and adjacent to the beach and subject to erosion and overtopping from high tides and waves during major coastal storms. The inland limit of the primary frontal dune occurs at the point where there is a distinct change from a relatively steep slope to a relatively mild slope.

Recreational vehicle means a vehicle which is: (i) built on a single chassis; (ii) 400 square feet or less when measured at the largest horizontal projections; (iii) designed to be self-propelled or permanently towable by a light duty truck; and (iv) designed primarily not for use as a permanent dwelling but as temporary living quarters for recreational, camping, travel, or seasonal use.

Regulatory floodway means the channel of a river or other watercourse and the adjacent land areas that must be reserved in order to discharge the base flood without cumulatively increasing the water surface elevation more than a designated height.

Repetitive loss means flood-related damage sustained by a structure on two separate occasions during a 10-year period for which the cost of repairs at the time of each such event is over \$1,000 or, on the average, equals or exceeds 25% of the market value of the structure before the damage occurred.

Riverine means relating to, formed by, or resembling a river (including tributaries), stream, brook, etc.

Sand dunes mean naturally occurring accumulations of sand in ridges or mounds landward of the beach.

Special flood hazard area: See "Area of special flood hazard."

Start of construction (for other than new construction or substantial improvements under the Coastal Barrier Resources Act (Pub. L. 97-348)), includes substantial improvement and means the date the building permit was issued, provided the actual start of construction, repair, reconstruction, rehabilitation, addition placement, or other improvement was within 180 days of the permit date. The actual start means either the first placement of permanent construction of a structure on a site, such as the pouring of slab or footings, the installation of piles, the construction of columns, or any work beyond the stage of excavation; or the placement of a manufactured home on a foundation. Permanent construction does not include land preparation, such as clearing, grading and filling; nor does it include the installation of streets and/or walkways; nor does it include excavation for basement, footings, piers or foundations or the erection of temporary forms; nor does it include the installation on the property of accessory buildings, such as garages or sheds not occupied as dwelling units or not part of the main structure. For a substantial improvement, the actual start of construction means the first alteration of any wall,

ceiling, floor, or other structural part of a building, whether or not that alteration affects the external dimensions of the building.

Structure means, for floodplain management purposes, a walled and roofed building, including a gas or liquid storage tank, that is principally above ground, as well as a manufactured home.

Substantial damage means damage of any origin sustained by a structure whereby the cost of restoring the structure to its before damaged condition would equal or exceed 50 percent of the market value of the structure before the damage occurred.

Substantial improvement means any reconstruction, rehabilitation, addition, or other improvement of a structure, the cost of which equals or exceeds 50 percent of the market value of the structure before "start of construction" of the improvement. This term includes structures which have incurred "substantial damage" or "repetitive loss", regardless of the actual repair work performed. The term does not, however, include either: (1) Any project for improvement of a structure to correct existing violations of state or local health, sanitary, or safety code specifications which have been identified by the local code enforcement official and which are the minimum necessary to assure safe living conditions or (2) Any alteration of a "historic structure", provided that the alteration will not preclude the structure's continued designation as a "historic structure."

Variance means a grant of relief by a community from the terms of a floodplain management regulation. (For full requirements see Section 60.6 of the National Flood Insurance Program regulations.)

Violation means the failure of a structure or other development to be fully compliant with the community's floodplain management regulations. A structure or other development without the elevation certificate, other certifications, or other evidence of compliance required in Section 60.3(b)(5), (c)(4), (c)(10), (d)(3), (e)(2), (e)(4), or (e)(5) is presumed to be in violation until such time as that documentation is provided.

Water surface elevation means the height, in relation to the National Geodetic Vertical Datum (NGVD) of 1929 (or other datum, where specified), of floods of various magnitudes and frequencies in the floodplains of coastal or riverine areas.

(Ord. No. 07-04, 5-21-2007; Ord. No. 2016-226, 10-10-2016; Ord. No. 2021-403 , 2-8-2021, eff. 3-1-2021)

Sec. 30-36. Lands to which this article applies.

This article shall apply to all areas of special flood hazard within the jurisdiction of the City of Shoreacres.
(Ord. No. 07-04, 5-21-2007)

Sec. 30-37. Basis for establishing the areas of special flood hazard.

The areas of special flood hazard identified by the Federal Emergency Management Agency in the current scientific and engineering report entitled, "The Flood Insurance Study for Harris County and Incorporated Areas," dated January 6, 2017, with accompanying Flood Insurance Rate Maps and/or Flood Boundary-Floodway Maps (FIRM and/or FBFM) dated January 6, 2017 and any revisions thereto are hereby adopted by reference and declared to be a part of this article.

(Ord. No. 07-04, 5-21-2007; Ord. No. 2016-226, 10-10-2016)

Sec. 30-38. Compliance.

No structure or land shall hereafter be located, altered, or have its use changed without full compliance with the terms of this article and other applicable regulations.

(Ord. No. 07-04, 5-21-2007)

Sec. 30-39. Abrogation and greater restrictions.

This article is not intended to repeal, abrogate, or impair any existing easements, covenants, or deed restrictions. However, where this article and another ordinance, easement, covenant, or deed restriction conflict or overlap, whichever imposes the more stringent restrictions shall prevail.

(Ord. No. 07-04, 5-21-2007)

Sec. 30-40. Interpretation.

In the interpretation and application of this article, all provisions shall be; (1) considered as minimum requirements; (2) liberally construed in favor of the governing body; and (3) deemed neither to limit nor repeal any other powers granted under State statutes.

(Ord. No. 07-04, 5-21-2007)

Sec. 30-41. Warning and disclaimer of liability.

The degree of flood protection required by this article is considered reasonable for regulatory purposes and is based on scientific and engineering considerations. On rare occasions greater floods can and will occur and flood heights may be increased by manmade or natural causes. This article does not imply that land outside the areas of special flood hazards or uses permitted within such areas will be free from flooding or flood damages. This article shall not create liability on the part of the community or any official or employee thereof for any flood damages that result from reliance on this article or any administrative decision lawfully made hereunder.

(Ord. No. 07-04, 5-21-2007)

Sec. 30-42. Minimum base flood elevation—Design flood elevation.

All structures shall be built to a minimum elevation of the FEMA base flood elevation plus a two-foot free-board, also known as design flood elevation. Datum used shall be based on the most recent adjustment figures established by the Harris Galveston Coastal Subsidence District. Method of measurement shall be done in accordance with this article.

(Ord. No. 07-04, 5-21-2007; Ord. No. 2016-226, 10-10-2016; Ord. No. 2021-403 , 2-8-2021, eff. 3-1-2021)

Sec. 30-43. New and replaced electrical service equipment.

On an existing structure, a newly installed electrical service disconnect, meter pan, meter socket, service tray, or load distribution center (breaker box) shall be installed at or above the design flood elevation or four feet above the highest floor. Exception: An existing load distribution center (breaker box) in a non-substantially damaged structure may be replaced in its pre-existing location without elevating to or above the design flood elevation or four feet above the highest floor.

(Ord. No. 2016-226, 10-10-2016; Ord. No. 2016-229, 10-24-2016; Ord. No. 2022-03 , § 1, 2-14-2022)

Sec. 30-44—30-65. Reserved.

DIVISION 2. ADMINISTRATION

Sec. 30-66. Designation of the floodplain administrator.

The city manager, or designee, is hereby appointed the floodplain administrator to administer and implement the provisions of this article and other appropriate sections of 44 CFR (Emergency Management and Assistance - National Flood Insurance Program Regulations) pertaining to floodplain management.

(Ord. No. 07-04, 5-21-2007; Ord. No. 2009-46, 8-10-2009; Ord. No. 2021-403 , 2-8-2021, eff. 3-1-2021)

Sec. 30-67. Duties and responsibilities of the floodplain administrator.

Duties and responsibilities of the floodplain administrator shall include, but not be limited to, the following:

- (1) Maintain and hold open for public inspection all records pertaining to the provisions of this article.
- (2) Review permit application to determine whether to ensure that the proposed building site project, including the placement of manufactured homes, will be reasonably safe from flooding.
- (3) Review, approve or deny all applications for development permits required by adoption of this article.
- (4) Review permits for proposed development to assure that all necessary permits have been obtained from those federal, state or local governmental agencies (including Section 404 of the Federal Water Pollution Control Act Amendments of 1972, 33 U.S.C. 1334) from which prior approval is required.
- (5) Where interpretation is needed as to the exact location of the boundaries of the areas of special flood hazards (for example, where there appears to be a conflict between a mapped boundary and actual field conditions) the floodplain administrator shall make the necessary interpretation.
- (6) Notify, in riverine situations, adjacent communities and the state coordinating agency which is the Texas Water Development Board (TWDB) and also the Texas Commission on Environmental Quality (TCEQ) and Harris County Flood Control District, prior to any alteration or relocation of a watercourse, and submit evidence of such notification to the Federal Emergency Management Agency.
- (7) Assure that the flood-carrying capacity within the altered or relocated portion of any watercourse is maintained.
- (8) When base flood elevation data has not been provided in accordance with section 30-37, the floodplain administrator shall obtain, review and reasonably utilize any base flood elevation data and floodway data available from a federal, state or other source, in order to administer the provisions of division 3 of this article.
- (9) When a regulatory floodway has not been designated, the floodplain administrator must require that no new construction, substantial improvements, or other development (including fill) shall be permitted within zones A1—30 and AE on the community's FIRM, unless it is demonstrated that the cumulative effect of the proposed development, when combined with all other existing and anticipated development, will not increase the water surface elevation of the base flood more than one foot at any point within the community.
- (10) Under the provisions of 44 CFR Chapter 1, Section 65.12, of the National Flood Insurance Program regulations, a community may approve certain development in zones A1—30, AE, AH, on the community's FIRM which increases the water surface elevation of the base flood by more than one foot, provided that the community first completes all of the provisions required by Section 65.12.

(Ord. No. 07-04, 5-21-2007; Ord. No. 2016-226, 10-10-2016)

Sec. 30-68. Establishment of development permit.

A floodplain development permit shall be required to ensure conformance with the provisions of this article.

(Ord. No. 07-04, 5-21-2007)

Sec. 30-69. Permit procedures.

- (1) Application for a floodplain development permit shall be presented to the floodplain administrator on forms furnished by him/her and may include, but not be limited to, plans in duplicate drawn to scale showing the location, dimensions, and elevation of proposed landscape alterations, existing and proposed structures, including the placement of manufactured homes, and the location of the foregoing in relation to areas of special flood hazard. Additionally, the following information is required:
 - (a) Elevation (in relation to mean sea level), of the lowest floor (including basement) of all new and substantially improved structures;
 - (b) Elevation in relation to mean sea level to which any nonresidential structure shall be floodproofed;
 - (c) A certificate from a registered professional engineer or architect that the nonresidential floodproofed structure shall meet the floodproofing criteria of subsection 30-92(2);
 - (d) Description of the extent to which any watercourse or natural drainage will be altered or relocated as a result of proposed development;
 - (e) Maintain a record of all such information in accordance with subsection 30-67(1);
- (2) Approval or denial of a floodplain development permit by the floodplain administrator shall be based on all of the provisions of this article and the following relevant factors:
 - (a) The danger to life and property due to flooding or erosion damage;
 - (b) The susceptibility of the proposed facility and its contents to flood damage and the effect of such damage on the individual owner;
 - (c) The danger that materials may be swept onto other lands to the injury of others;
 - (d) The compatibility of the proposed use with existing and anticipated development;
 - (e) The safety of access to the property in times of flood for ordinary and emergency vehicles;
 - (f) The costs of providing governmental services during and after flood conditions including maintenance and repair of streets and bridges, and public utilities and facilities such as sewer, gas, electrical and water systems;
 - (g) The expected heights, velocity, duration, rate of rise and sediment transport of the floodwaters and the effects of wave action, if applicable, expected at the site;
 - (h) The necessity to the facility of a waterfront location, where applicable;
 - (i) The availability of alternative locations, not subject to flooding or erosion damage, for the proposed use.

(Ord. No. 07-04, 5-21-2007)

Sec. 30-70. Variance procedures.

- (1) The appeal board, as established by the community, shall hear and render judgment on requests for variances from the requirements of this article.
- (2) The appeal board shall hear and render judgment on an appeal only when it is alleged there is an error in any requirement, decision, or determination made by the floodplain administrator in the enforcement or administration of this article.

-
- (3) Any person or persons aggrieved by the decision of the appeal board may appeal such decision in the courts of competent jurisdiction.
 - (4) The floodplain administrator shall maintain a record of all actions involving an appeal and shall report variances to the Federal Emergency Management Agency upon request.
 - (5) Variances may be issued for the reconstruction, rehabilitation or restoration of structures listed on the National Register of Historic Places or the State Inventory of Historic Places, without regard to the procedures set forth in the remainder of this article.
 - (6) Variances may be issued for new construction and substantial improvements to be erected on a lot of one-half acre or less in size contiguous to and surrounded by lots with existing structures constructed below the base flood level, providing the relevant factors in subsection 30-69(2) of this article have been fully considered. As the lot size increases beyond the one-half acre, the technical justification required for issuing the variance increases.
 - (7) Upon consideration of the factors noted above and the intent of this article, the appeal board may attach such conditions to the granting of variances as it deems necessary to further the purpose and objectives of this article (section 30-33).
 - (8) Variances shall not be issued within any designated floodway if any increase in flood levels during the base flood discharge would result.
 - (9) Variances may be issued for the repair or rehabilitation of historic structures upon a determination that the proposed repair or rehabilitation will not preclude the structure's continued designation as a historic structure and the variance is the minimum necessary to preserve the historic character and design of the structure.
 - (10) Prerequisites for granting variances:
 - (a) Variances shall only be issued upon a determination that the variance is the minimum necessary, considering the flood hazard, to afford relief.
 - (b) Variances shall only be issued upon: (i) showing a good and sufficient cause; (ii) a determination that failure to grant the variance would result in exceptional hardship to the applicant, and (iii) a determination that the granting of a variance will not result in increased flood heights, additional threats to public safety, extraordinary public expense, create nuisances, cause fraud on or victimization of the public, or conflict with existing local laws or ordinances.
 - (c) Any application to which a variance is granted shall be given written notice that the structure will be permitted to be built with the lowest floor elevation below the base flood elevation, and that the cost of flood insurance will be commensurate with the increased risk resulting from the reduced lowest floor elevation.
 - (11) Variances may be issued by a community for new construction and substantial improvements and for other development necessary for the conduct of a functionally dependent use provided that (i) the criteria outlined in subsections 30-70(1)—(9) are met, and (ii) the structure or other development is protected by methods that minimize flood damages during the base flood and create no additional threats to public safety.

(Ord. No. 07-04, 5-21-2007)

Secs. 30-71—30-90. Reserved.

DIVISION 3. FLOOD HAZARD REDUCTION

Sec. 30-91. General standards.

In all areas of special flood hazards the following provisions are required for all new construction and substantial improvements:

- (1) All new construction or substantial improvements shall be elevated on pilings and columns and designed (or modified) and adequately anchored to prevent flotation, collapse or lateral movement of the structure resulting from hydrodynamic and hydrostatic loads, including the effects of buoyancy. Water loading values used shall be those associated with the base flood. Wind loading values used shall be those required by applicable state or local building standards. A registered professional engineer or architect shall develop or review the structural design, specifications and plans for the construction, and shall certify that the design and methods of construction to be used are in accordance with accepted standards of practice for meeting the provisions of this subsection.;
- (2) All new construction or substantial improvements shall be constructed by methods and practices that minimize flood damage;
- (3) All new construction or substantial improvements shall be constructed with materials resistant to flood damage;
- (4) All new construction or substantial improvements shall be constructed with electrical, heating, ventilation, plumbing, and air conditioning equipment and other service facilities that are designed and/or located above the design flood elevation so as to prevent water from entering or accumulating within the components during conditions of flooding;
- (5) All new and replacement water supply systems shall be designed to minimize or eliminate infiltration of floodwaters into the system;
- (6) New and replacement sanitary sewage systems shall be designed to minimize or eliminate infiltration of floodwaters into the system and discharge from the systems into floodwaters; and
- (7) On-site waste disposal systems shall be located to avoid impairment to them or contamination from them during flooding.
- (8) Prohibit the use of fill for structural support of buildings.
- (9) Prohibit the use of fill to raise the grade of any lot above the minimum required to achieve proper drainage.
- (10) In all areas of special flood hazards, require positive drainage paths to guide floodwaters away from the building site.
- (11) Enclosures below the base flood elevation are usable solely for parking of vehicles, building access, or storage. Owner(s) of new and/or substantially improved buildings will be required to sign a non-conversion agreement that must be filed with the deed. Enclosures shall be subject to inspection at any time.
- (12) All new construction shall be located landward of the reach of mean high tide.
- (13) Prohibit manmade alteration of sand dunes and mangrove stands that increase potential flood damage.

(Ord. No. 2016-226, 10-10-2016; Ord. No. 2021-403 , 2-8-2021, eff. 3-1-2021)

Sec. 30-92. Specific standards.

In all areas of special flood hazards where base flood elevation data has been provided as set forth in (i) section 30-70, (ii) subsection 30-67(8), or (iii) subsection 30-93(3), the following provisions are required:

-
- (1) *Residential construction.* New construction and substantial improvement of any residential structure shall have the lowest horizontal structural member including basement and all attendant utilities, elevated to or above the base flood elevation plus a two-foot free-board (design flood elevation). The pile column foundation and the structure attached thereto must be anchored to resist floatation, collapse, and lateral movement due to the effects of wind and water loads acting simultaneously on all building components. Water loading values used shall be those associated with the base flood. Wind loading values used shall be those required by applicable state or local building standards. A registered professional engineer or architect shall develop or review the structural design, specifications and plans for the construction, and shall certify that the design and methods of construction to be used are in accordance with accepted standards of practice for meeting the provisions of this section.
 - (2) *Nonresidential construction.* New construction and substantial improvements of any commercial, industrial or other nonresidential structure shall either have the lowest horizontal structural member including basement and all attendant utilities elevated to or above the base flood elevation plus a two-foot free-board (design flood elevation) or together with attendant utility and sanitary facilities, be designed so that below the base flood level plus the two-foot free-board (design flood elevation), the structure is watertight with walls substantially impermeable to the passage of water and with structural components having the capability of resisting hydrostatic and hydrodynamic loads and effects of buoyancy. The pile column foundation and the structure attached thereto must be anchored to resist floatation, collapse, and lateral movement due to the effects of wind and water loads. A registered professional engineer or architect shall develop and/or review structural design, specifications, and plans for the construction, and shall certify that the design and methods of construction are in accordance with accepted standards of practice as outlined in this subsection. A record of such certification which includes the specific elevation (in relation to mean sea level) to which such structures are floodproofed shall be maintained by the floodplain administrator.
 - (3) Provide that all new construction and substantial improvements shall have the space below the lowest horizontal structural member plus a two-foot free-board (design flood elevation) either free of obstruction or constructed with non-supporting breakaway walls, open wood latticework, or insect screening intended to collapse under wind and water loads without causing collapse, displacement, or other structural damage to the elevated portion of the building or supporting foundation system.

For the purpose of this section, a breakaway wall shall have a design safe loading resistance of not less than ten and no more than 20 pounds per square foot. A registered engineer shall provide a breakaway wall certificate to certify this design. Use of breakaway walls which exceed a design safe loading resistance of 20 pounds per square foot (either by design or when so required by local or state codes) may be permitted only if a registered professional engineer or architect certifies that the designs proposed meet the following conditions:

- (i) Breakaway wall collapse shall result from a water load less than that which would occur during the base flood; and
 - (ii) The elevated portion of the building and supporting foundation system shall not be subject to collapse, displacement, or other structural damage due to the effects of wind and water loads acting simultaneously on all building components (structural and nonstructural). Water loading values used shall be those associated with the base flood. Wind loading values used shall be those required by applicable state or local building standards. Such enclosed space shall be useable solely for parking of vehicles, building access, or storage. Such space shall not be used for human habitation.
- (4) *Enclosures.* New construction and substantial improvements, with fully enclosed areas below the lowest floor that are usable solely for parking of vehicles, building access or storage in an area other than a basement and are constructed with non-supporting breakaway walls consistent with subsection (3) and which are subject to flooding shall be designed to automatically equalize hydrostatic flood forces on exterior walls by allowing for the entry and exit of floodwaters. Designs for meeting this

requirement must either be certified by a registered professional engineer or architect or meet or exceed the following minimum criteria:

- (a) A minimum of two openings on separate walls having a total net area of not less than one square inch for every square foot of enclosed area subject to flooding shall be provided.
 - (b) The bottom of all openings shall be no higher than one foot above grade.
 - (c) Openings may be equipped with screens, louvers, valves, or other coverings or devices provided that they permit the automatic entry and exit of floodwaters.
 - (d) Enclosures below the base flood elevation are usable solely for parking of vehicles, building access, or storage. Owner(s) of new and/or substantially improved buildings will be required to sign a non-conversion agreement that must be filed with the deed. Enclosures shall be subject to inspection at any time.
- (5) *Manufactured homes.*
- (a) Require that all manufactured homes shall be installed using methods and practices which minimize flood damage. For the purposes of this requirement, the pile column foundation and the structure attached thereto must be anchored and elevated to resist floatation, collapse, and lateral movement due to the effects of wind and water loads. Methods of anchoring may include, but are not limited to, use of over-the-top or frame ties to ground anchors. This requirement is in addition to applicable State and local anchoring requirements for resisting wind forces.
 - (b) Require that manufactured homes that are placed or substantially improved on sites (i) outside of a manufactured home park or subdivision, (ii) in a new manufactured home park or subdivision, (iii) in an expansion to an existing manufactured home park or subdivision, or (iv) in an existing manufactured home park or subdivision on which a manufactured home has incurred "substantial damage" as a result of a flood, be elevated on a permanent foundation of pilings and columns such that the lowest horizontal structural member of the manufactured home is elevated to or above the base flood elevation plus a two-foot free-board (design flood elevation) and the pile column foundation must be securely anchored to an adequately anchored foundation system to resist flotation, collapse, and lateral movement.
 - (c) Require that manufactured homes be placed or substantially improved on sites in an existing manufactured home park or subdivision with zones A1—30, AH and AE on the community's FIRM that are not subject to the provisions of paragraph (4) of this section be elevated so that either:
 - (i) The lowest floor of the manufactured home is at or above the base flood elevation plus a two-foot free-board (design flood elevation), and
 - (ii) The manufactured home chassis is supported by reinforced piers or other foundation elements of at least equivalent strength that are no less than 60 inches in height above grade and be securely anchored to an adequately anchored foundation system to resist flotation, collapse, and lateral movement.
- (6) *Recreational vehicles.* Require that recreational vehicles placed on sites within zones A1—30, AH, and AE on the community's FIRM either (i) be on the site for fewer than 180 consecutive days, or (ii) be fully licensed and ready for highway use, or (iii) meet the permit requirements of subsection 30-69(1), and the elevation and anchoring requirements for "manufactured homes" in paragraph (4) of this section. A recreational vehicle is ready for highway use if it is on its wheels or jacking system, is attached to the site only by quick disconnect type utilities and security devices, and has no permanently attached additions.

(Ord. No. 07-04, 5-21-2007; Ord. No. 2009-46, 8-10-2009; Ord. No. 2021-403 , 2-8-2021, eff. 3-1-2021)

Sec. 30-93. Standards for subdivision proposals.

- (1) All subdivision proposals including the placement of manufactured home parks and subdivisions shall be consistent with sections 30-32, 30-33, and 30-34 of this article.
- (2) All proposals for the development of subdivisions including the placement of manufactured home parks and subdivisions shall meet floodplain development permit requirements of section 30-68; section 30-69; and the provisions of division 3 of this article.
- (3) Base flood elevation data shall be generated for subdivision proposals and other proposed development including the placement of manufactured home parks and subdivisions which is greater than 50 lots or five acres, whichever is lesser, if not otherwise provided pursuant to section 30-37 or subsection 30-67(8) of this article.
- (4) All subdivision proposals including the placement of manufactured home parks and subdivisions shall have adequate drainage provided to reduce exposure to flood hazards.
- (5) All subdivision proposals including the placement of manufactured home parks and subdivisions shall have public utilities and facilities such as sewer, gas, electrical and water systems located and constructed to minimize or eliminate flood damage.

(Ord. No. 07-04, 5-21-2007)

Sec. 30-94. Standards for areas of shallow flooding (AO/AH zones).

Located within the areas of special flood hazard established in section 30-37, are areas designated as shallow flooding. These areas have special flood hazards associated with flood depths of one to three feet where a clearly defined channel does not exist, where the path of flooding is unpredictable, and where velocity flow may be evident. Such flooding is characterized by ponding or sheet flow; therefore, the following provisions apply:

- (1) All new construction and substantial improvements of residential structures shall have the lowest horizontal structural member (excluding pilings and columns) including basement and attendant utilities elevated to or above the base flood elevation plus a two-foot free-board (design flood elevation) or the highest adjacent grade at least as high as the depth number specified in feet on the community's FIRM plus a two-foot free-board (at least four feet if no depth number is specified).
- (2) All new construction and substantial improvements of nonresidential structures [shall];
 - (a) Have the lowest floor (including basement) elevated to or above the base flood elevation plus a two-foot free-board or the highest adjacent grade at least as high as the depth number specified in feet on the community's FIRM plus a two-foot free-board (at least four feet if no depth number is specified), or
 - (b) Together with attendant utility and sanitary facilities be designed so that below the base specified flood depth in an AO Zone plus two feet, or below the base flood elevation plus a two-foot free-board in an AH Zone, the structure is watertight with walls substantially impermeable to the passage of water and with structural components having the capability of resisting hydrostatic and hydrodynamic loads of effects of buoyancy.
- (3) A registered professional engineer or architect shall submit a certification to the floodplain administrator that the standards of this section, as proposed in section 30-69, are satisfied.
- (4) Require within zones AH or AO adequate drainage paths around structures on slopes, to guide floodwaters around and away from proposed structures.

(Ord. No. 07-04, 5-21-2007; Ord. No. 2021-403 , 2-8-2021, eff. 3-1-2021)

Sec. 30-95. Floodways.

Floodways located within areas of special flood hazard established in section 30-37, are areas designated as floodways. Since the floodway is an extremely hazardous area due to the velocity of floodwaters which carry debris, potential projectiles and erosion potential, the following provisions shall apply:

- (1) Encroachments are prohibited, including fill, new construction, substantial improvements and other development within the adopted regulatory floodway unless it has been demonstrated through hydrologic and hydraulic analyses performed in accordance with standard engineering practice that the proposed encroachment would not result in any increase in flood levels within the community during the occurrence of the base flood discharge.
- (2) If subsection 30-95(1) above is satisfied, all new construction and substantial improvements shall comply with all applicable flood hazard reduction provisions of division 3.
- (3) Under the provisions of 44 CFR Chapter 1, Section 65.12, of the National Flood Insurance Program Regulation, a community may permit encroachments within the adopted regulatory floodway that would result in an increase in base flood elevations, provided that the community first completes all of the provisions required by Section 65.12.

(Ord. No. 07-04, 5-21-2007)

Sec. 30-96. Coastal high hazard areas.

Located within the areas of special flood hazard established in section 30-37, are areas designated as coastal high hazard areas (zones V1—30, VE, and/or V). These areas have special flood hazards associated with high velocity waters from tidal surges and hurricane wave wash; therefore, in addition to meeting all provisions outlined in this ordinance, the following provisions must also apply:

- (1) Obtain the elevation (in relation to mean sea level) of the bottom of the lowest structural member of the lowest floor (excluding pilings and columns) of all new and substantially improved structures, and whether or not such structures contain a basement. The floodplain administrator shall maintain a record of all such information.
- (2) All new construction shall be located landward of the reach of mean high tide.
- (3) All new construction and substantial improvements shall be elevated on pilings and columns so that:
 - (i) The bottom of the lowest horizontal structural member of the lowest floor (excluding the pilings or columns) is elevated to or above the base flood elevation plus a two-foot free-board (design flood elevation);
 - (ii) The pile or column foundation and structure attached thereto is anchored to resist flotation, collapse and lateral movement due to the effects of wind and water loads acting simultaneously on all building components. Water loading values used shall be those associated with the base flood. Wind loading values used shall be those required by applicable state or local building standards. A registered professional engineer or architect shall develop or review the structural design, specifications and plans for the construction, and shall certify that the design and methods of construction to be used are in accordance with accepted standards of practice for meeting the provisions of subsections (3)(i) and (ii) of this section.
- (4) Provide that all new construction and substantial improvements have the space below the lowest horizontal structural member plus two-feet either free of obstruction or constructed with nonsupporting breakaway walls, open wood latticework, or insect screening intended to collapse under wind and water loads without causing collapse, displacement, or other structural damage to the elevated portion of the building or supporting foundation system.

For the purpose of this section, a breakaway wall shall have a design safe loading resistance of not less than ten and no more than 20 pounds per square foot. Use of breakaway walls which exceed a design safe loading resistance of 20 pounds per square foot (either by design or when so required by local or state codes) may be permitted only if a registered professional engineer or architect certifies that the designs proposed meet the following conditions:

- (i) Breakaway wall collapse shall result from a water load less than that which would occur during the base flood; and
 - (ii) The elevated portion of the building and supporting foundation system shall not be subject to collapse, displacement, or other structural damage due to the effects of wind and water loads acting simultaneously on all building components (structural and nonstructural). Water loading values used shall be those associated with the base flood. Wind loading values used shall be those required by applicable state or local building standards. Such enclosed space shall be useable solely for parking of vehicles, building access, or storage. Such space shall not be used for human habitation.
- (5) Prohibit the use of fill for structural support of buildings.
 - (6) Prohibit manmade alteration of sand dunes and mangrove stands that increase potential flood damage.
 - (7) Manufactured homes require that manufactured homes placed or substantially improved within Zone V1—30, V, and VE on the community's FIRM on sites (i) outside of a manufactured home park or subdivision, (ii) in a new manufactured home park or subdivision, (iii) in an expansion to an existing manufactured home park or subdivision, or (iv) in an existing manufactured home park or subdivision on which a manufactured home has incurred "substantial damage" as the result of a flood, meet the standards of paragraphs (1) through (6) of this section and that manufactured homes placed or substantially improved on other sites in an existing manufactured home park or subdivision within zones V1—30, V, and VE on the community's FIRM meet the requirements of subsection 30-92(4) of this article.
 - (8) Recreational vehicles require that recreational vehicles placed on sites within zones V1—30, V, and VE on the community's FIRM either (i) be on the site for fewer than 180 consecutive days, or (ii) be fully licensed and ready for highway use, or (iii) meet the requirements in section 30-68 of this article and paragraphs (1) through (6) of this section. A recreational vehicle is ready for highway use if it is on its wheels or jacking system, is attached to the site only by quick disconnect type utilities and security devices, and has no permanently attached additions.

(Ord. No. 07-04, 5-21-2007; Ord. No. 2021-403 , 2-8-2021, eff. 3-1-2021)

Secs. 30-97—30-120. Reserved.

DIVISION 4. PENALTIES FOR NONCOMPLIANCE

Sec. 30-121. Penalties for noncompliance.

No structure or land shall hereafter be constructed, located, extended, converted, or altered without full compliance with the terms of this article and other applicable regulations. Violation of the provisions of this article by failure to comply with any of its requirements (including violations of conditions and safeguards established in connection with conditions) shall constitute a misdemeanor. Any person who violates this article or fails to comply with any of its requirements shall upon conviction thereof be fined not more than the maximum allowed by law or imprisoned for not more than the maximum number of days allowed by law, or both, for each violation, and in addition shall pay all costs and expenses involved in the case. Nothing herein contained shall prevent the City of Shoreacres from taking such other lawful action as is necessary to prevent or remedy any violation.

(Ord. No. 07-04, 5-21-2007)

Section 2. Should any part, section, subsection, paragraph, sentence, clause, or phrase contained in this resolution be held to be unconstitutional or of no force and effect, such holding shall not affect the validity of the remaining portion of this resolution, but in all respects said remaining portion shall be and remain in full force and effect.

Section 3. It is hereby officially found and determined that the meeting at which this Ordinance was passed was open to the public and that public notice of the time, place and purpose of said meeting was given as required by the Open Meeting Act, Chapter 551 of the Texas Government Code.

Section 4. This Ordinance is effective immediately upon its passage and approval.

PASSED AND APPROVED by the City Council of the City of Shoreacres, Texas this the 11th day of December 2023.

David Jennings, Mayor
